Source: New Jersey Healthcare-Associated Infections for 2019 submitted through the National Healthcare Safety Network (NHSN).

- a Expected (E)= # of infections predicted using the 2015 Baseline and risk-adjusted models.
Important to note that if Expected is <1, the SIR is not calculated as the result is not precise.
 - b Standardized Infection Ratio (SIR)= Observed (O)/ Expected (E)
 - ‡ Each hospital is compared to the National Ratio=1 which is derived using the CDC's NHSN data from the 2015 baseline.
 - L indicates hospital infections are LOWER than infections seen nationally.
 - H indicates hospital infections are HIGHER than infections seen nationally.
 - S indicates hospital infections are SIMILAR to infections seen nationally.
 - SIR is not calculated because the Expected is < 1.
- N/A: Procedures not performed
